

PSE

Compact Panel Mount Hall-Effect Rotary Sensor

True, contactless operation

Without any gears or mechanical interfaces the sensor is easily assembled and calibrated and subject to limited wear and tear over lifetime.

Durable and robust design

The non-contacting design allows for an extra-long product lifetime of up to 50 million cycles.

Integrated shaft

The magnet is securely fastened to the shaft and acts as only moving component in the sensor.

Made for harsh environments

The rugged package protects the sensor from dust, moisture, vibration and extreme temperatures for usage in the most demanding environments.

Adaptable to your requirements

Custom mechanical design, programmable transfer function as well as different output protocols and redundancy levels available.

DESCRIPTION

Piher Sensing Systems' PSE Series Rotary Position Sensors are based on contactless hall-effect technology and deliver high accuracy and linearity in a compact package. Increased rotational life and robustness against humidity, vibration and shock make them perfectly suited for harsh industrial and transportation environments. These absolute sensors will not lose its values even after a power failure.

The PSE end-of-shaft sensor is offered in two versions: one with 360 degree endless rotation with programmable electrical angles from 15 to 360 degrees (without deadband) and another version that stops the rotary movement at rotational travel of 290 degrees.

Custom versions with different shafts and customer specific output curves can be delivered on request.
